

D8.1 Report on best Experimental Production Scenarios

sauce

Grant Agreement nr	780470
Project acronym	SAUCE
Project start date (duration)	January 1st 2018 (36 months)
Document due:	M12
Actual delivery date	20/12/2018
Leader	Filmakademie [FA]
Reply to	simon.spielmann@filmakademie.de
Document status	for submission

Project funded by H2020 from the European Commission

Project ref. no.	780470
Project acronym	SAUCE
Project full title	SAUCE
Document name	D8.1 Report on best Experimental Production Scenarios
Security (distribution level)	CO
Contractual date of delivery	December 31th 2018 [M12]
Actual date of delivery	December 20th 2018 [M12]
Deliverable name	D8.1 Report on best Experimental Production Scenarios
Type	Report
Status & version	for submission
Number of pages	24
WP / Task responsible	FA
Other contributors	DNEG, IK, USAAR
Author(s)	Volker Helzle, Jonas Trottnow, Simon Spielmann
EC Project Officer	Ms. Cristina Maier, Cristina.MAIER@ec.europa.eu
Abstract	This deliverable provides a detailed overview of potential experimental production scenarios and their requirements for tools and technologies developed throughout the SAUCE project. Concrete scenarios are described, which are intended to evaluate a wide range of technologies developed within SAUCE. These include lightfield capturing and postprocessing, smart assets, the asset transformation and search framework, crowd simulation editing and (semi-)automated adaptation to new environments, semantic animations and intuitive virtual production tools. All productions are targeted to evaluate one or more developments in WP8T3 Prototype Evaluation. A single production evaluating all aspects of SAUCE has proven to be insufficient. The described productions also provide an impression on the impact of the achievements to the VFX and creative industries of the future. In addition to the description of potential experimental productions, this document also summarises the requirements for the developed technologies to make the experimental productions achievable.
Keywords	Experimental Productions, Lightfield, Virtual Production, Smart Assets, Semantic Animation, Evaluation
Sent to peer reviewer	YES
Peer review completed	YES
Circulated to partners	NO
Read by partners	NO
Mgt. Board approval	NO

Document History

Version and date	Reason for Change
1.0 14-11-18	document created by Jonas Trottnow
1.1 14-12-18	Version for internal review
1.2 20-12-18	Revisions in response to review: final versions submitted to Commission

Table of Contents

1 EXECUTIVE SUMMARY	6
2 BACKGROUND	6
3 INTRODUCTION	8
3.1 Main objectives and goals	8
3.2 Methodology	9
4 PRODUCTION AND SCENARIO REQUIREMENTS	10
4.1 Lightfield	10
4.1.1 Camera and Software requirements	10
4.1.2 Production Requirements	10
4.2 Smart Assets	11
4.3 Search and Transformation Framework	11
4.3.1 Image Search	11
4.4 Semantic Animation	12
4.4.1 Tools and approach to generating composite animation sequences from discrete clips with automatically generated in-betweens	12
4.4.2 Time Space and world awareness approach for animation synthesis	13
4.4.3 Retargeting live mocap data and modifying avatar to virtual world	13
4.4.4 Autonomous background characters towards motion stylization	14
5 Productions	15
5.1 Unfolding (Lightfield)	15
5.1.1 Concept	15
5.1.2 Scenario	15
5.1.3 Potential evaluation	16
5.2 Historical Moments in XR - Genscher in Prague '89 (Asset Transformation)	17
5.2.1 Background	17
5.2.2 Scenario	18
5.2.3 Potential evaluation	18
5.3 Sematic Animation in Virtual Production	18
5.3.1 Background	18
5.3.2 Scenario	18
5.3.3 Potential evaluation	19
5.4 Search framework	19
5.4.1 Background	19
5.4.2 Scenario	20
5.4.3 Potential evaluation	20
5.5 Production Prototyping using Smart Assets	21
5.5.1 Background	21
5.5.2 Scenario	21

5.5.3 Potential evaluation	21
5.6 VFX Productions at DNEG	22
5.6.1 Background	22
5.6.2 Scenario	22
5.6.3 Potential evaluation	22
6 Evaluation strategies	23
7 Conclusion	23
8 References	24
9 Acronyms and abbreviations	24

1 EXECUTIVE SUMMARY

This deliverable provides a detailed overview of potential experimental production scenarios and their requirements for tools and technologies developed throughout the SAUCE project.

Concrete scenarios are described, which are intended to evaluate a wide range of technologies developed within SAUCE. These include lightfield capturing and postprocessing, smart assets, the asset transformation and search framework, crowd simulation editing and (semi-)automated adaptation to new environments, semantic animations and intuitive virtual production tools. The described potential productions are mainly based on running or future productions at Filmakademie and DNEG making them a solid foundation for realistic, professional production scenarios.

All productions are targeted to evaluate one or more developments in WP8T3 Prototype Evaluation. A single production evaluating all aspects of SAUCE has proven to be insufficient. As example the 'Unfolding' project will evaluate the potential of the new lightfield rig built by the University of Saarland as well as the possibilities of the captured material in postproduction, based on algorithms implemented by other partners.

The described productions also provide an impression on the impact of the achievements to the VFX and creative industries of the future. In addition to the description of potential experimental productions, this document also summarises the requirements for the developed technologies to make the experimental productions achievable. This is the deliverable for WP8T1 Investigation of achievable Experimental Productions in WP8 Experimental Production, Evaluation and Innovation Assessment.
